Navy business case analysis example

Business Case Analysis (BCA) provides an analysis of the best value, which takes into account not only costs, but also other quantifiable and non-quantifiable factors that confirm the investment decision. This may include, but is not limited to, performance, strength, reliability, service convenience and increased support. BCA is a useful tool that helps in clarifying the many solutions that are part of the definition of the best value strategy. It follows an iterative process, conducted and updated as needed throughout the lifecycle, as program plans evolve and respond to changes in the business environment and mission. Business Case Analysis: Used in the original decision to invest in the project. Directs the decision on the choice of alternative approaches. Used to check any proposed areas, schedules, or budget changes during the project. It should also be used to determine the different budget accounts and amounts affected by the different product support strategies. There should be a live document as the project or organization changes, they should be reflected in business case updates. It should be used to confirm that the planned benefits are realized at the end of the project. At a minimum, the BCA should include: an introduction that determines what the case is about (the subject) and why (its purpose) is necessary. The introduction presents the objectives set by the subject of the case. Methods and assumptions in which worn out methods of analysis and justification that fix the boundaries of the case (whose costs and whose benefits were considered for how long). This section sets out the rules for deciding what is relevant and what is not, as well as important assumptions. The impact on the business has a financial and non-financial impact on the business expected in one or more scenarios. A risk assessment that shows how the results depend on important assumptions (what if), as well as the likelihood that other results will pop up. Conclusions and recommendations for specific actions based on business objectives and analysis. The Ministry of Information issued guidelines for the BCA's Productivity Logistics Memorandum (PBL) in the USD Memorandum (ATL) on 23 January 2004, and the Performance-Based Business Case Analysis (PBL) business case. OSD has released a guide highlighting the use of business case analysis as a primary tool to support PBL support strategy solutions. Updated: 8/31/2017 Home Of the Encyclopedia of the ISBN 978-1929500109 © 2021 Solution Matrix Ltd All Rights Reserved Library Business Case Sample Research presents cases from a wide range of areas. Case builders find practical help and useful ideas in other people's works on the same topic. It's good to read what costs and benefits they predict. How they assign financial value to business benefits. Cause-and-effect chains they credit for predictive results. This information may be even for casebuilder using different business case methodologies, or building cases for different purposes. As a result, this page has links to various examples of cases and articles that can help with your own work to create a case. Solution Matrix Ltd does not necessarily endorse methods or conclusions in cases related here, and they vary greatly in purpose, scope and quality. Solution Matrix Ltd does not necessarily endorse methods or conclusions in all cases related here, and they vary greatly in purpose, scope and quality. JSF will serve forces, the Navy and the Marine Corps, as well as many of our key international allies. In 1998, the Ministry of Health initiated the JSF alternative engine programme in an attempt to achieve cost savings, productivity improvements and other intangible benefits similar to those achieved during the Great War of the F-16 engines. Congress periodically discussed the pros and cons of the alternative JSF engine program without coming to a real consensus on the topic. The last debate coincided with the budget request for fiscal year 2007, which led to the proposed cancellation and elimination of funding for the F136 program. While Congress eventually restored most of the program's funding for this year, the Department of Health again proposed eliminating the program in its budget proposal for fiscal year 2008. With a program of this magnitude, the savings and productivity benefits that will be derived are significant. Before the Ministry of Health decides to discontinue the alternative engine program, a thorough and objective analysis must be carried out to weigh the costs and benefits of the second engine program. This thesis is an analysis of business cases (BCA) costs, benefits, problems and effects associated with maintaining an alternative JSF engine program. It compares scenarios to dual source and the only source for the development, production and maintenance of the JSF engine lifecycle. The study also looks at past DOD engine acquisition programs, including a highly successful F-16/F-15 dual-source engine, to set a precedent for potential monetary and non-work savings that could result from competition. Finally, the dissertation examines the uncool consequences of the repeal of the program for the Ministry of Health, its allies and the industrial base. Base.
